

FOUR STOP

HIGH- GRIP ABSORBENT MAT

MAGiC
ABSORBENT AND COATED PRODUCTS

PATENTED

STRUCTURE:

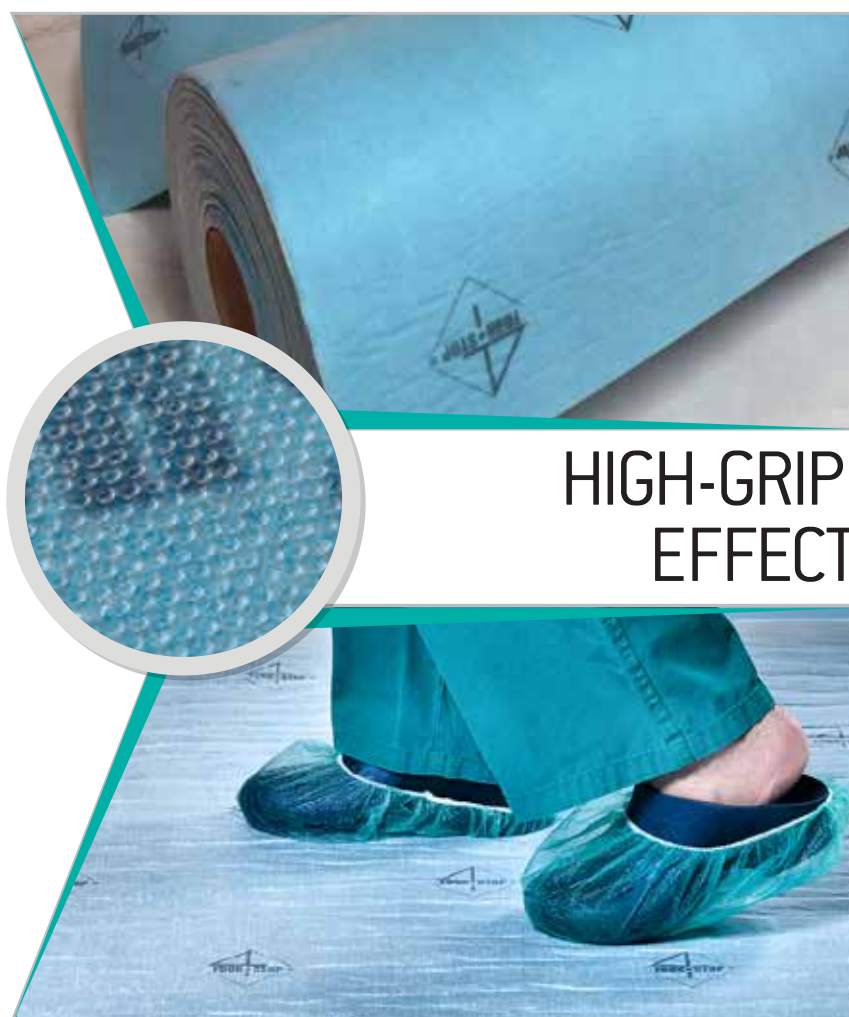

It is an high-grip super-absorbent mat, studied to contain and absorb spills in the hospitals, especially in operating theatres, around surgical sinks, in central sterile service departments (CSSD).

The non-wetting top layer consists of a three dimensional perforated film that, thanks to the conical holes, grants a fast and homogeneous absorption and keeps the standing surface dry.

The absorption is ensured by the super-absorbent central layer composed by cellulose.

The non-slip backing grips to the floor, prevents slips and falls, keeps the floor dry and clean (also in procedures where saline fluids are used in abundance) and reduces cleanup time.

4STOP is available in different absorption capacities, in rolls with 90 cm width and 30 / 50 linear meters length; it can be used in combination with the practical dispenser. It is also available in cut sizes (ex. 90x150cm).

HIGH-GRIP EFFECT

The benefits

- Keeps the floor dry
- Different weights available
- Floor gripping
